

# The Clinton C of E Geography Update

The Clinton Church of England School

In Kingfishers KS1 we have been naming and locating the UK's countries and capital cities. We have explored how we use compass points to locate places and now moved on to exploring continents of the world. We will be exploring the equator and northern/southern hemispheres. We will also focus in on temperatures and climate around the world.

## Geography at The Clinton:

This half term we have had Geography as one of our driving subjects. This has allowed us to really focus in on securing geographical skills from previously taught sequences as well as now extending our learning and knowledge further. Our Early Years have focused on using location and positional language and learning about our skies at night. Key Stage One have been securing knowledge about the UK. Key Stage Two have been extending their knowledge of the UK and countries of the world.

In Little Otters and EY we have been curious about our skies at night and linked in some learning with fireworks night. We have been exploring key texts that have allowed us to use a range of direction and position language and talk about where things are and how they travel. We have made rockets and talked about places they can go. We have also been using the Beebots.

In Swallows we have started a new unit based on the UK's National Parks. We have thought about the countries that make up the UK, the seas and oceans that surround it and the capital city of each country. We explored the features of an urban and rural area and used this [link](#) to find out how much of different areas of the UK is; built on, green urban land, natural land and farmland which was really interesting to compare different areas. We will look at features of national parks going forwards and explore particular ones.
